# Sameer Khan

Data Engineer

medium.com@void_sam
github.com@voidd-sam
linkedin.com@void_sam
Portfolio@sameer-khan.xyz

## PROFESSIONAL SUMMARY

Data engineer with experience building data pipelines, automated failure recovery using LLM and real-time data processing systems with Python, SQL, Kafka, dbt, Docker, and Airflow. Comfortable working across the data stack from ingestion to debugging production issues.

## TECHNICAL SKILLS

**Languages & Framework** Python, SQL, JavaScript, C, Bash

**Data Engineering** Apache Kafka/Airflow, Databricks, dbt, PostgreSQL, DuckDB

**ML/AI TOOLING** LangGraph, LangChain, FastAPI, WebSockets

**Infrastructure & tools** Docker, Git/GitHub, Prometheus

## EXPERIENCE

**Weproz Tech** | Data Analyst Internship **(*startup*)** Apr 2026 - Jun 2026

- Gathered, cleaned, and validated data from multiple internal and external sources, fixing inconsistencies and missing values.
- Built reports and dashboards in Excel and Power BI, presenting key metrics through tables and charts to improve visibility across the team.
- Adapted quickly to shifting priorities in a fast paced startup environment, supporting ad-hoc data requests and cross-functional tasks beyond the core analyst role.

## PROJECTS

**Self healing pipeline |** *Kafka, scikit-learn, LangGraph, FastAPI* */Github*

- Built a langGraph system that autonomously detects broken dbt pipelines, inspects live Postgres schemas, and rewrites SQL to resolve schema drift.
- Automated GitOps workflow to push validated fixes directly to GitHub Pull Requests, maintaining a human-in-the-loop review process.
- Containerized the entire data stack (Airflow, dbt, Postgres) using Docker Compose for idempotent, one-click deployments

**LLM Gateway** | *Python, FastAPI, Redis, Docker, Prometheus* */Github*

- Built a gateway to dynamically route LLM traffic to cheap/expensive models based on prompt complexity.
- Built a benchmark validating semantic caching and cost-aware routing, achieving up to a 80% cache hit rate and reducing costs by routing cache misses to lower-cost models.
- Containerized the stack with Docker Compose, exposing real-time token metrics via Prometheus

## OPEN SOURCE CONTRIBUTION

**GM-Hyprland** *(A full Desktop for hyprland )* */Github*

- Architected a Hyprland desktop configuration integrating Waybar, Rofi, Dunst, Kitty, and custom themes with modular,with documented configs.
- Created automated installation script reducing setup complexity from manual hours to one command deployment, gaining 6+ GitHub stars and community adoption

## EDUCATION

Bachelor of Computer Application in Data Science

*Integral University* | *CGPA: 8.3* July 2021 - Jun 2026
